

ISO 45001 Lead Implementer Training Course

DURATION

5 days

CONTACT HOURS

30

LEVEL

Intermediate

FEE PER DELEGATE

US\$1,500

Building a 45001 system that changes how work is done, rather than a set of documents that passes an audit.

Most 45001 implementations produce a system that satisfies a certification body and leaves the work unchanged. The clauses are not the problem. The usual failures are a context and risk assessment copied from a template, worker participation that means a noticeboard, and objectives nobody is accountable for. This week implements the standard clause by clause, with the emphasis on the parts that are hardest to fake: leadership, participation, hazard identification done with the people exposed, and an internal audit that finds something. Delegates build the system for their own organisation.

Available as classroom, live online, in house.

Who it is for

HSE managers and advisers implementing or improving a 45001 system, management representatives and system coordinators, and the internal auditors who will audit it.

What you will be able to do

- Establish context, interested parties and scope in terms specific to the organisation.
- Identify hazards and assess risk with the workers exposed to them.
- Produce the documented information the standard requires, and no more.
- Set objectives with an owner, a measure and a date.
- Run an internal audit and a management review that produce decisions.

The outline

DAY 1

Context and scope

Internal and external issues, specific rather than generic · Interested parties, and their actual requirements · Scope, and the exclusions that will be questioned · Legal and other requirements, and keeping the register current

DAY 2

Leadership and participation

What leadership commitment looks like in evidence · Policy that constrains a decision rather than restating intent · Worker participation and consultation, beyond a noticeboard · Roles, responsibilities and delegated authority

DAY 3

Planning

Hazard identification with the people exposed · Risk and opportunity, assessed and recorded · Objectives with an owner, a measure and a date · Planning a change before it is implemented

DAY 4

Support and operation

Competence, awareness, and the records behind them · Documented information, and how much is actually required · Operational control and the hierarchy of controls · Contractors, procurement and emergency preparedness

DAY 5

Checking and improving

Monitoring and measurement that informs a decision · An internal audit that finds something · Incident investigation, nonconformity and corrective action · Management review, and the decisions it has to produce

What you leave with

- A gap analysis of the delegate's organisation against the clauses.
- An implementation plan with owners and sequence.
- A hazard identification and risk assessment method with worker participation built in.

Published dates

DATES	WHERE	FEE
23 to 27 November 2026	Dubai, United Arab Emirates	US\$1,500
30 November 2026 to 4 December 2026	Cairo, Egypt	US\$1,500
7 to 11 December 2026	Nairobi, Kenya	US\$1,500
14 to 18 December 2026	Kampala, Uganda	US\$1,500

Fees are per delegate and cover travel and accommodation arranged by the delegate. Registration fees are separate.
