PROJECT AND CONTRACT MANAGEMENT

Monitoring and Evaluation for Programmes

DURATION	CONTACT HOURS	LEVEL	FEE PER DELEGATE
5 days	30	Intermediate	R15,000

Design monitoring that shows whether a programme is working, and evaluation that can support a claim.

Monitoring frequently records activity rather than effect, which leaves a programme unable to say whether it achieved anything. This programme covers logic models, indicator design, data collection and the evaluation designs that can and cannot support a causal claim.

Available as classroom, live online, in house.

Who it is for

Programme managers, monitoring and evaluation officers, and funders assessing programme performance.

What you will be able to do

- Build a logic model that makes the causal assumption explicit.
- Design indicators that measure effect rather than activity.
- Plan data collection that is proportionate and actually happens.
- Choose an evaluation design matched to the claim being made.

The outline

Taught across 5 days. The sections below are the curriculum rather than a day by day timetable.

SECTION 1

Logic and assumptions

Inputs through to outcomes · Making the causal assumption explicit · Where logic models mislead · Stakeholder agreement on intent

SECTION 2

Indicators and data

Activity against effect · Indicator definition · Proportionate collection · Data quality in the field

SECTION 3

Evaluation

Designs and what each can claim · Attribution and contribution · Reporting negative findings · Using evaluation to change a programme

What you leave with

- A logic model with assumptions stated.
- An indicator set at output and outcome level.
- A data collection plan with responsibilities.
- An evaluation design with its limits documented.
